Job Market Paper

The academic cost of international conflict

Abstract: Countries involved in international armed conflicts pay a high price in terms of human capital. By leveraging the start of the Russo-Ukrainian war in 2022, I analyse causally the cost that Russia-based researchers had to pay in academic terms. I find that the start of the conflict brought along a penalty to academics based in Russia, who see their citations drop in a magnitude similar to the penalties found following paper retractions. This drop is heterogeneous by the origin of citations, with some regions where citations grow in the treatment period. I also find that Russian-based researchers struggle to publish their research in international journals, even if they maintain similar productivity levels as in the pre-war period. Emigration seems to alleviate the problem, although with some delay.
